Tissue Distribution/Metabolite Identification Invited Talk

Due to the work being proprietary to Merck, I cannot share the slides or a demo of the software.

I was invited to give a talk to Merck Research Laboratories (MRL), Pharmacokinetics, Pharmacodynamics and Drug Metabolism (PPDM), Tissue Distribution and Metabolite Identification (TD/ID) group. The people that invited me were Dr. Christopher Kochansky and Dr. Mark Cancilla.

This was an hour long presentation whereby I explained how my Python software internship project was applicable to 50 of the group members, including the department director, and its usefulness for all other groups in Merck that use LC-MS software. The presentation ended with a demo and a Q&A session.

Thanks in part to the presentation, this group currently utilizes the software regularly.
